I am a software engineer with five years of full-stack development experience and over a decade of product strategy experience. My current work involves building complex web applications from the ground up across various verticals, including brick & mortar retail operations, blockchain and finance, and LLM-powered education tools. As a former founder, I am most comfortable with roles that offer product ownership and require initiative.

ACHIEVEMENTS

- Built and launched a staff and task management platform for a chain of brick & mortar businesses in the San Francisco area.
- Built and launched Drill AI, a set of LLM-power tools for language learners.
- Built and launched a compliant platform for issuing private securities on Ethereum
- Led the design of a medical billing platform that won an honorable mention from a U.S. Department of Health and Human Services competition)
- Led a reorganization of EveryBill's software development process, significantly increasing productivity (one senior engineer described it as "a game changer")

EXPERIENCE

Cooperativ Labs Inc., Founder & Full Stack Engineer

Berlin, Germany | February 2021 - Present

- Full-stack software development
